

Final Project Presentation & Submission

CS 472/572: Unsupervised Machine Learning Spring '26

PRESENTATION RUBRIC

Criterion	What Is Evaluated
Progress & Implementation Update	Clear demonstration of what has been built since the overview. Working code, pipeline, or model is shown with evidence not just descriptions. Students can speak to how the implementation works.
Data & Preprocessing	Shows what the dataset looks like after cleaning and preprocessing. Includes visualizations, data shape, distributions, or sample outputs. Preprocessing steps are explained.
Initial Results & Discussion	Preliminary experimental results are presented — plots, metrics, or qualitative outputs. Student discusses what the results suggest and articulates clear next steps toward the final submission.
Presentation Clarity	Slides are organized, readable, and not overcrowded. Presenter communicates clearly within the allotted time. Both group members contribute to the presentation.

You also need to include the link in the Presentation Slide:

1. GitHub page
2. GitHub Repository

WHAT YOUR PRESENTATION MUST INCLUDE

Your presentation should reflect meaningful progress from your overview. The following four elements are required:

	Implementation Update	Show working code, a running pipeline, or a trained model. Demonstrate it live or with screenshots/outputs. This should be noticeably more complete than your overview.
	Data After Preprocessing	Show what your dataset looks like after cleaning and preprocessing — distributions, sample rows, shape, class balance, or any transformations applied. Visuals are expected.
	Initial Experimental Results	Present preliminary outputs: cluster visualizations, metric scores, reconstructions, or qualitative findings. Briefly discuss what the results suggest and what questions remain.
	Code Snippet	Include at least one meaningful code snippet showing your implementation, model definition, training loop, preprocessing step, or evaluation function.

BONUS GRADE (+2point)

To be eligible for the bonus point, your presentation must include a dedicated slide titled “Bonus: What We Did Extra.” The slide must be structured as follows:

Slide Section	What to Write
What we proposed	Write exactly what you committed to in your original project proposal, the specific method, dataset, and goals you outlined.
What we did extra	Describe the specific additional contribution: a new method, extended dataset, extra experiment, novel comparison, or unexpected finding that goes clearly beyond the original scope.
Why it matters	One to two sentences explaining why this extra work adds value to the project or to the field.

Important:

- I. The bonus slide must be explicitly labeled and clearly distinguishable from the rest of your presentation.
- II. The extra work must go beyond what was stated in your original proposal. Completing the proposed scope fully does not qualify.
- III. The grader will evaluate whether the addition is genuine and adds meaningful value. Vague or minor additions will not receive the bonus.
- IV. If the bonus slide is missing, no bonus will be awarded regardless of the work done.

FINAL PROJECT SUBMISSION INSTRUCTIONS

Due: May 7, Thursday, 11:59 PM: No extensions.

Please follow these instructions exactly to avoid penalties.

What to Upload and Where

1. Slides & Project Package(both) → [Drive](#)

Upload your final presentation slides to the shared Drive folder: [Drive link].

Your slides must include both links:

- GitHub Webpage (project site)
- GitHub Repository

2. Project Package → Canvas Assignment

Create a folder named: `Group<Number>_<YourFullName>`

Inside that folder, include:

- Project paper (Grad)
- All source code (with README, requirements/environment file)
- Any assets and results needed to reproduce your work

Zip the folder (the ZIP file keeps the same name) and upload it to the Canvas Final Project assignment.

Group Submission Rule

- I. Each person must submit the same ZIP in Canvas individually.
- II. Slides go to Drive once per group.

Deadline and Policy

- **Due: May 7, Thursday, 11:59 PM.** Submissions after the deadline will not be accepted.
- Because this is end-of-semester grading, I cannot go back and forth to fix submission issues. It is your responsibility to ensure links open and files run.
- **Penalty: -5 points** if you submit incorrectly and then email me to fix it.

Final Checklist: Tick Before Submitting

- ☐ Slides uploaded to Drive; slides contain GitHub Webpage and GitHub Repository links
- ☐ Folder named `Group<Number>_<YourFullName>_<YourProjectTitle>`
- ☐ Paper (Grad) included
- ☐ Code + README + `requirements.txt` / `environment.yml` + run instructions included *[varies depending how you structure it!]*
- ☐ All required data pointers/paths and results/figures included
- ☐ Folder zipped and ZIP uploaded to Canvas Final Project assignment
- ☐ All teammates have uploaded the same ZIP in Canvas individually
